biological and other natural processes have always been a source of inspiration for computer science and information technology many emerging problem solving techniques integrate advanced evolution and cooperation strategies encompassing a range of spatio temporal scales for visionary conceptualization of evolutionary computation this book is a collection of research works presented in the vi international workshop on nature inspired cooperative strategies for optimization nisco held in canterbury uk previous editions of nisco were held in granada spain 2006 2010 acireale italy 2007 tenerife spain 2008 and cluj napoca romania 2011 nisco 2013 and this book provides a place where state of the art research latest ideas and emerging areas of nature inspired cooperative strategies for problem solving are vigorously discussed and exchanged among the scientific community the breadth and variety of articles in this book report on nature inspired methods and applications such as swarm intelligence hyper heuristics evolutionary algorithms cellular automata artificial bee colony dynamic optimization support vector machines multi agent systems ant clustering evolutionary design optimisation game theory and other several cooperation models

evolutionary computation has been widely used in computer science for decades even though it started as far back as the 1960s with simulated evolution the subject is still evolving during this time new metaheuristic optimization approaches like evolutionary algorithms genetic algorithms swarm intelligence etc were being developed and new fields of usage in artificial intelligence machine learning combinatorial and numerical optimization etc were being explored however even with so much work done novel research into new techniques and new areas of usage is far from over this book presents some new theoretical as well as practical aspects of evolutionary computation this book will be of great value to undergraduates graduate students researchers in computer science and anyone else with an interest in learning about the latest developments in evolutionary computation

information security and optimization maintains a practical perspective while offering theoretical explanations the book explores concepts that are essential for academics as well as organizations it discusses aspects of techniques and tools definitions usage and analysis that are invaluable for scholars ranging from those just beginning in the field to established experts what are the policy standards what are vulnerabilities and how can one patch them how can data be transmitted securely how can data in the cloud or cryptocurrency in the blockchain be secured how can algorithms be optimized these are some of the possible queries that are answered here effectively using examples from real life and case studies features a wide range of case studies and examples derived from real life scenarios that map theoretical explanations with real incidents descriptions of security tools related to digital forensics with their unique features and the working steps for acquiring hands on experience novel contributions in designing organization security policies and lightweight cryptography presentation of real world use of blockchain technology and biometrics in cryptocurrency and personalized authentication systems discussion and analysis of security in the cloud that is important because of extensive use of cloud services to meet organizational and research demands such as data storage and computing requirements information security and optimization is equally helpful for undergraduate and postgraduate students as well as for researchers working in the domain it can be recommended as a reference or textbook for courses related to cybersecurity
