the nervous system is the product of biological evolution and is shaped by the interplay between extrinsic factors determining the ecology of animals and by intrinsic processes that dictate the developmental rules that give rise to adult functional structures this special topic is oriented to develop an integrative view from behavior and ecology to neurodevelopmental processes we address questions such as how do sensory systems evolve according to ecological conditions how do neural networks organize to generate adaptive behavior how does cognition and brain connectivity evolve what are the developmental mechanisms that give rise to functional adaptation accordingly the book is divided in three sections i evolution of sensorimotor systems ii cognitive computations and neural circuits and iii development and brain evolution we hope that this initiative will support an interdisciplinary program that addresses the nervous system as a unified organ subject to both functional and developmental constraints where the final outcome

results of a compromise between different parameters rather than being the result of several single variables acting independently of each other

uses the brain's five major learning systems: emotional, social, cognitive, physical, and reflective to provide a framework for designing lessons and determining teaching approaches

John Ratey, bestselling author and clinical professor of psychiatry at Harvard Medical School, lucidly explains the human brain's workings and paves the way for a better understanding of how the brain affects who we are. Ratey provides insight into the basic structure and chemistry of the brain and demonstrates how its systems shape our perceptions, emotions, and behavior by giving us a greater understanding of how the brain responds to the guidance of its user. He provides us with knowledge that can enable us to improve our lives. In a user's guide to the brain, Ratey clearly and succinctly surveys what scientists now know about the brain and how we use it. He looks at the brain as a malleable organ capable of improvement and change like any muscle and examines the way specific motor functions might be applied to overcome neural disorders ranging from everyday shyness to autism. Drawing on examples from his practice and from everyday life, Ratey illustrates that the most important lesson we can learn about our brains is how to use them to their maximum potential.
